## **DETAILED ACTION**

## Response to Arguments

1. Applicant's arguments, see remarks, filed April 17, 2007, with respect to the rejection(s) of claim(s) 50-54 have been fully considered and are persuasive.

Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Liston US 3,817,425.

## Claim Rejections - 35 USC § 103

- 2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 3. Claims 50-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liston US 3,817,425 in view Hamblin et al US 6,607,522.

Liston disclose a specimen dispenser adapted for dispensing and mixing a liquids in which first and second syringes are used to dispense a sample liquid and a reagent liquid. The inlet orifice of the second syringe is connected to a second end opening of the first syringe. The second syringe 280 is smaller than first syringe 290.

Liston does not specify mixing a lipid protein mixture.

Hamblin et al. disclose it is contemplated that such a device may comprise a syringe in which the lipid, proteinaceous material, active agent and/or photosensitizer solutions are separated by a plate that contains serrations which will penetrate the photosensitizer containing compartment and then allow mixing of the contents of that compartment with the contents of the protein containing compartment. In that the operation of the kits will generally rely on photo-oxidative mechanisms and singlet

Art Unit: 1743

oxygen generation, one may wish to store the photosensitizer, the lipid, protein, polypeptide, peptide and/or active agent containing compositions in a high oxygen atmosphere or in an atmosphere which has a higher oxygen concentration or tension than usual (column 22, lines 25+).

Example 5, at column 32 describes a method in which a protein mixture is employed and activated with a stimulator to produce crystalline growths within an 8-well slide.

It would have been obvious to one of ordinary skill in the art to recognize the device of Liston may be employed to mix and dispense a number of materials including lipid proteins as illustrated by Hamblin.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian R. Gordon whose telephone number is 571-272-1258. The examiner can normally be reached on M-F, Telework Thurs., 1st Fri. Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/688,650
